State of Residence:: OH
Country of Residence:: US

SCROLL BAR FABRIC PROTECTORS

JUNE A. ABEL, 383 PROSPECT RD., BEREA, OHIO 44017

BRIEF SUMMARY OF THE INVENTION

01 This present invention is a needlework accessory to aid in the protection of non-working ends of needlework fabric mounted on scroll bars from becoming soiled or damaged from repeated handling by the needleworker.

02 To achieve the above, this present invention incorporates the use of magnets sewn into the top and bottom edges of slightly padded strips of fabric. The magnetic strips of fabric are wrapped around the non-working ends of the needlework fabric that has been mounted on scroll bars. It serves to protect the non-working ends of needlework fabric mounted on scroll bars which would otherwise remain exposed. The present invention allows the needleworker freedom to hold or touch the non-working ends without damaging or soiling the needlework fabric while the needleworker is working on their needlework. The present invention can remain over the needlework fabric while mounted on the scroll bars for an indefinite period of time without harm to either the needlework fabric or the scroll bars or like frames.

BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWINGS

FIG. 1 is a perspective view of where and how the present invention of a needlework accessory fits around the top and bottom of a non-working ends of needlework fabric that has been mounted on a scroll bar.

FIG. 2 is a detailed perspective view of the one end of the present invention partially folded over on an elongated bar representing one end of a scroll bar.

SCROLL BAR FABRIC PROTECTORS

FIG. 3 is a one dimensional view of the layers used in making the present invention.

DETAILED DESCRIPTION OF THE INVENTION

01 Referring to FIG. 1, the needlework accessory 1 is designed generally for the use by a needleworker to place on each end of a non-working scroll bar after needlework fabric has been mounted to protect the exposed ends of non-working fabric from damage from repeated handling.

02 Referring to FIG. 1 and FIG 2, the needlework accessory 1 wraps around the end of a scroll bar 3 and is held together securely by the meeting of female and male magnets 2 which are incorporated inside the ends of the needlework accessory. The magnets 2 provide a snug meeting of the fabric ends of the needlework accessory. They are easy to remove or reposition by separating the fabric ends of the needlework accessory with your hands. This produces no harm to needlework fabric mounted on a scroll bar or to the frame itself regardless of how long the needlework accessory remains over the non-working ends of the needlework fabric.

03 Referring to FIG. 3, the needlework accessory is comprised of three layers; the fabric for the outer layer 4, a lightly padded middle layer with muslin or other fabric 5 & 6 on the inside. The lightly padded middle layer also serves to cushion the magnets and protect the ends of the non-working fabric. The three layers are sewn together around the outer edges with pockets made 7 for the magnets to slip into which are then also sewn closed 8 .
